

## A new innovative custom-ready fin design

There is a growing demand in the boating industry for stabilization systems helping the boat or yacht to provide comfort onboard. Humphree won the DAME Award for its electric fin stabilizer system 2015 and we continue making it more easy for the boat producers to install and use our systems. Our latest innovation is a new fin design opening for significantly improved boat production but also even better performance from the stabilizer fins.

In many boats the hull design result in that the fin needs to be cut and rebuilt in order to be fitted without touching the hull when it rotates resulting in time and costly fiberglass work for every new fin creating a hassle for the boat producers, retro fit shipyards and when a spare part is needed.

### The new Humphree fin design has its upper edge made solid, another unique Humphree innovation

- The common need to cut the fin to avoid touching the hull is now very easy as no lamination is required. Simply cut the thin solid part of the fin to required shape and it is ready to be installed. It is further possible to reach a better tolerance of the modification compared to the traditional cutting/fiberglass work.

HUMPHREE CUSTOMIZABLE FIN

**DAME**  
NOMINATED  
2017

OUR NEW PRODUCT HUMPHREE CUSTOMIZABLE FIN, HAS BEEN NOMINATED IN THE CATEGORY MACHINERY PROPULSION, MECHANICAL AND ELECTRICAL SYSTEMS AND FITTINGS, BY THE JURY FOR THE DAME - DESIGN AWARD 2017.
