

KCR 60m Navy vessel with Humphree Active Stabilisation

## Humphree signs new orders with Indonesian Government

New Indonesian navy vessels will be built. Once again an Indonesian governmental delegation visited Humphree Headquarte during three days in September to conduct a Factory Acceptance Test (FAT) of Humphree Stabilisation equipment. A FAT usually includes a check of completeness, a verification against contractual requirements, a proof of functionality and a final inspection. This test takes place before installation and the results of these tests give clients confidence in how the system will perform.

The enthusiastic and investigative Indonesian team was hosted by Humphree representants and supported by Humphree distributor WEKA Marine & Offshore Equipments, Singapore.

Humphree is a Swedish marine company specialized in Interceptor Trim Tab Systems, Course Stabilising Fins and Automatic trim system for trim control. Packaging our knowhow in hydrodynamics, electronics and digital control onto products easy to use and install.
