

Perfect match for innovative Turkish yacht builder.

M/Y Rock is equipped with Humphree All Speed Stabilisation which has been shown to be a perfect match for this new and innovative yacht. During the sailing from the yard in Turkey to the Cannes Boat Show, the boat and the crew encountered bad weather. In that situation the captain and the owner of the yacht experienced the efficiency of the Humphree Stabilisation system. Captain Hasan Aktop - "We were impressed and highly appreciated the comfort and safety that the system provided onboard. We have also discovered the amazing features at zero speed with the electric fin stabilisers, they also prevent anchor walk in bow and stern anchor mode. We can actually run the system without the generators on for up to 12 hours with Lithium-ion batteries from Mastervolt. This gives the opportunity to make ROCK a complete silent vessel during night time. All and all, a very successful installation with high performance and low noise."

HUMPHREE FEATURES:

- Active stabilisation
- 2x 1,0m² fin stabilisers
- 2x HE 1200 interceptors
